SUMMARY

- Software Engineering Intern with strong computer science fundamentals and hands-on experience building, testing, and optimizing software systems, including production-level open-source contributions and CI/CD-driven workflows, while collaborating with distributed teams and incorporating feedback to improve solution quality.

SKILLS

- **Languages:** JavaScript, TypeScript, C++
- **CS Fundamentals:** Data Structures, Algorithms, Object-Oriented Programming, Debugging
- **Frameworks/Libraries:** React.js, Next.js, Express.js, Pandas, NumPy
- **Databases:** MySQL, MongoDB
- **Tools:** Git, GitHub Actions, Docker, Postman
- **Practices:** Code Reviews, CI/CD, REST APIs, Testing, Version Control

EXPERIENCE

Open Source Software Contributor Dec 2025 – Present
[Camel-AI](#) — [Ghostfolio](#) — [OpenFrontIO](#) — [Agenta-AI](#) — [Yamada UI](#) —

- Refactored backend and frontend components across production-grade repositories (1K–15K+ stars), improving maintainability and eliminating duplicated logic.
- Introduced reusable abstractions and resolved edge cases in serialization, date handling, and accessibility, improving reliability without breaking compatibility.
- Collaborated with global maintainers through structured code reviews and iterative feedback to deliver production-ready changes.

Microsoft Learn Student Ambassador (MLSA) Apr 2025 – Present

- Led five hands-on technical workshops on React, GitHub, and Azure, engaging 200+ students through live demonstrations and guided exercises.
- Supported peer mentoring and knowledge-sharing initiatives, increasing participation in technical projects and open-source contributions.

GirlScript Summer of Code (GSSoC EXT '24) — Contributor Oct 2024 – Dec 2024

- Integrated critical pull requests and performed in-depth reviews, increasing test coverage by 5% and resolving high-priority defects.
- Improved CI/CD reliability using GitHub Actions, reducing build failures and accelerating feedback cycles.

Postman Student Expert Oct 2024 – Dec 2024

- Built automated API test workflows validating authentication, request handling, and response correctness using Postman.

PROJECTS

CereBroAI – Multimodal Brain Tumor Detection

- Built and tuned a convolutional neural network using Python and NumPy, achieving 95% classification accuracy.
- Integrated MRI and EEG data to improve detection sensitivity by 30% and reduce false positives by 5%.

TuxTimer – Terminal-Based Work Session Manager

- Developed a lightweight Python CLI to track work sessions with minimal resource usage.
- Added task suggestions and session summaries, improving task completion rates by 15%.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science Engineering

Bennett University, Greater Noida

CGPA: 8.81
