Summary

Third-year B.Tech Computer Science student with a strong foundation in Python, C++, and Data Structures & Algorithms. I am eager to apply my problem-solving skills to real-world product development in a dynamic environment. Actively building expertise in full-stack technologies and AI/ML concepts to contribute to innovative projects that shape the future of technology, like next-generation AGI applications. Seeking a technical internship to deliver tangible value while learning from industry experts.

Skills

Languages: C++, Python, SQL, HTML, CSS

Technologies & Tools: Jupyter Notebook, VS Code, Git & GitHub, Google Colab, Excel, REST APIs, Pandas, NumPy, Scikit-learn, XGBoost, TensorFlow, Matplotlib, Seaborn, NLTK, TF-IDF, Cosine Similarity, Time Series Analysis, Feature Engineering

Databases: MySQL

Education

BENNETT UNIVERSITY

Sept 2023 - May 2027

B.Tech in Computer Science and Engineering

CGPA: 8.7/10

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Advance Data Structures and Algorithms, Information Retrieval, Image Processing

Project Work

- **Crypto Prediction Model (2025):** Developed and implemented a predictive analytics model for cryptocurrency forecasting by integrating machine learning (XGBoost) and deep learning (LSTM) algorithms. Engineered financial time-series features to train models on historical market data, optimizing hyperparameters to enhance prediction accuracy and volatility capture for strategic investment analysis.
- **Movie Recommender System (2024):** Developed and led the implementation of a content-based Movie Recommender System in Python, utilizing TF-IDF vectorization, cosine similarity, and NLP techniques to deliver personalized film suggestions. I spearheaded data preprocessing, feature engineering, and model optimization, achieving 85%+ recommendation accuracy.
- **HR- Dashboard (2024):** Developed a role-based HR dashboard as part of a university assignment to manage employee data, leave tracking, and performance metrics. Implemented secure login system, dynamic data rendering, and charts for analytics. Applied full-stack development principles with responsive design.

Experience

Data Science Intern

Aug 2025 – Sept

2025

The Developers Arena

Applied the end-to-end data science lifecycle to a real-world project, gaining practical experience in data preprocessing, exploratory data analysis (EDA), and feature engineering. Developed and evaluated predictive models using **machine learning** algorithms in **Python** to derive actionable insights and support data-driven decision-making.

Certifications

- Data Visualization on Coursera
- Data Science on Infosys Springboard
- Object-Oriented Data Structures in C++ on Coursera
