 Noida

SUMMARY

Bachelor's degree in Computer Science with hands-on experience in building **end-to-end web applications (MERN stack)** and developing **AI/ML solutions**. Skilled in designing scalable **backend systems, REST APIs, and authentication flows**, while also experienced in **training machine learning and deep learning models** using TensorFlow and Scikit-learn. Strong foundation in **problem-solving, algorithms, and database management**, with deployments on **Flask, Vercel, and Firebase**.

EDUCATION

B.Tech Computer Science and Engineering

Bennett University, Greater Noida

2022–2026

CGPA:8.48

CBSE Class XII

GRG School, Sirsa

May 2021

Score:90.4%

KEY SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, C++, Python (Intermediate)

Frontend: HTML5, React.js, Next.js, Tailwind CSS, Context API

Backend: Node.js, Express.js, REST APIs, Authentication (JWT, OAuth)

Databases: MongoDB (Mongoose), MySQL, Firebase Firestore

DevOps/Deployment: Vercel, Firebase Hosting, Git/GitHub, Docker (basic)

AI/ML: TensorFlow, Scikit-learn, Deep Learning, Image Processing, OpenCV

Other: Problem-Solving (DSA), Artificial Intelligence, Deep Learning, API Integration, Linux

PROJECTS

SkinType – Deep Learning-Based Skin Type Classification

Tech Stack: TensorFlow, Keras, OpenCV, Flask, HTML, CSS

- I designed and developed a deep learning model using TensorFlow and Keras to accurately classify skin types from facial images.
- I handled data preprocessing, including image augmentation and normalization, to improve model performance and robustness.
- I used OpenCV to perform image handling tasks such as face detection, cropping, and lighting correction, ensuring consistent input quality.
- I demonstrated problem-solving by tuning hyperparameters to enhance accuracy, and used communication skills to coordinate development efforts and present our progress.
- I adapted to new libraries quickly and contributed to documentation and testing, showcasing my teamwork, adaptability, and attention to detail.
- Through this project, I strengthened my understanding of the machine learning pipeline and deployment process, while also improving soft skills like collaboration, time management, leadership, and the ability to explain technical concepts clearly during team discussions and demos.

Spotify Admin Clone – Music Admin Dashboard Web App

Tech Stack: Vite, React, TailwindCSS, Axios, React Router, PostCSS, ESLint

- I developed a Spotify admin dashboard clone using React and Vite, focusing on building a fast, modular, and fully responsive UI with TailwindCSS.
- I integrated Axios for dynamic API communication and utilized React Router to implement smooth and intuitive multi-page navigation.
- I practiced clean code principles, maintained component reusability, and contributed to improving overall project scalability.
- Collaborating with my team, I actively participated in sprint planning and task allocation, enhancing my team coordination and project management skills.
- Through this project, I deepened my skills in frontend performance optimization and learned the value of design consistency, user experience, and version control in collaborative development environment.

Crop Predictor – ML & IoT-Based Smart Agriculture System

Tech Stack: Python, TensorFlow, Raspberry Pi, Sensor Modules, Image Recognition

- I developed a machine learning and IoT-powered system to monitor crop health and protect plants from pests and diseases in real-time.
- I integrated environmental sensors with a Raspberry Pi to collect real-time data, and used image recognition techniques to detect signs of crop damage.
- I implemented machine learning models in TensorFlow and performed data preprocessing and analysis in Python to ensure high prediction accuracy.
- I contributed to writing and publishing a research paper that demonstrated the system's effectiveness in enhancing crop yield and reducing losses.
- This project strengthened my grasp on IoT integration, computer vision, and agricultural ML applications, while also improving my technical writing, research methodology, and presentation skills.

Food Delivery System – Online Food Ordering Web App

Tech Stack: JavaScript (Vanilla JS), HTML5, CSS3, FontAwesome

- I designed and developed a dynamic food ordering system where users can browse menus by categories (Biryani, Paneer, Chinese, South Indian, etc.), view ratings, and add items to a cart.
- I implemented a real-time cart management system, allowing users to add/remove items, adjust quantities, and view total price dynamically.
- I focused on responsive design principles, ensuring seamless usability across desktops and mobile devices.
- I applied DOM manipulation, event-driven programming, and UI logic building to enhance interactivity and maintain a smooth user experience.
- I demonstrated problem-solving by handling edge cases such as cart updates, empty cart behavior, and UI responsiveness on different devices.
- Through this project, I strengthened my frontend development skills and improved my ability to create user-friendly, scalable, and interactive web application
