Education

Bennett University

Bachelor of Technology in Computer Science

Expected Aug 2027

Greater Noida, IN

- CGPA: 8.3
- Relevant Coursework:** Data Structures, Algorithms, Artificial Intelligence, Operating Systems, Database Systems, Software Engineering

Achievements

- Solved 1000+ DSA problems** across LeetCode, Codeforces, CodeChef, GeeksforGeeks and AtCoder.
- Solved 300+ LeetCode problems**; achieved a global contest rank in the **top 25%** and earned the **Knight badge**.
- Reached **1300+ Codeforces rating (Pupil)** with strengths in **graphs, DP, and greedy algorithms**.
- 3-star Coder at CodeChef**; active participant in AtCoder contests.
- Published ML pipelines and notebooks on Kaggle with 1000+ views, applying ensemble models and deep learning frameworks.

Experience

Self Employed

Jan 2024 – Present

Software & AI Developer

Remote

- Developed and deployed **5+ end-to-end applications**, including **AI-powered apps, mobile apps, REST APIs, and ML workflows**.
- Created cross-platform mobile apps using **React Native** with backend integration in **Node.js and FastAPI**.
- Designed and optimized **database solutions with MySQL and MongoDB** for scalable storage and retrieval.
- Deployed applications on platforms like **Vercel, Netlify, and Render**, ensuring real-world usability for **200+ active users**.
- Collaborated in national-level hackathons (Adobe, Walmart, ISRO, Microsoft)**, building working prototypes within 24–48 hrs.

Projects

PDF Assistant | ML-Powered Mobile App (React Native)

Adobe India Hackathon, May 2025

- Built a **cross-platform mobile app** that parses PDFs into structured outlines with navigation and JSON export.
- Integrated **OCR + ML layout analysis** via a **FastAPI backend**, supporting both on-device and cloud inference.
- Reduced manual correction effort by **45%** through annotation tools and smart caching.

AstroPi | Diffusion-based Cloud Motion Forecasting

ISRO Hackathon, July 2025

- Developed a forecasting pipeline using **diffusion models** for INSAT-3DR/3DS satellite image sequences.
- Implemented preprocessing in **PyTorch**, boosting prediction accuracy by **25%** over CNN baseline.

Waldom | Real-Time 3D AI Avatar Assistant

Walmart Sparkathon, June 2025

- Created a **3D avatar with MediaPipe, OpenCV, and Three.js**, enabling natural real-time interaction.
- Integrated **Flask backend + websocket communication**, handling **100+ concurrent live sessions**.
- Achieved **90%+ gesture recognition accuracy**, improving user engagement in retail demo.

HoverGPT | Real-Time Hover Summarizer (Browser Extension)

Feb 2025

- Built **Chrome extension** that generates instant video/article summaries on hover using **React + FastAPI**.
- Integrated **LLM APIs with response caching**, achieving average **700ms latency per query**.
- Deployed on Vercel; tested with **200+ active users** during initial rollout.

Technical Skills

Languages: Python, Java, C++, JavaScript, TypeScript, SQL
Web & Mobile: React Native, ReactJS, Three.js, TailwindCSS
Backend: Node.js, Express.js, FastAPI, REST APIs
ML/AI: PyTorch, TensorFlow, Transformers, OpenCV
Databases: MySQL, MongoDB
