

AYUSH CHAUHAN

ayushc2904@gmail.com | +91-7827288928 |  

SKILLS

- **Programming Languages:** Python, C++, Java, SpringBoot, JavaScript, TypeScript, SQL
- **Web Development:** Tailwind CSS, React, Node.js, Next.js, GraphQL API, REST API, Keycloak(OAuth2/OIDC)
- **Database & Tools:** MySQL, MongoDB, PostgreSQL, Git, Postman, GenAI, Firebase
- **AI & Data Science:** NumPy, Pandas, NLP, HuggingFace, Sentence-Transformers, Semantic Search, LLM, Scikit

WORK EXPERIENCE

Software Development Intern (Remote) | Acuity IT Solutions

July 2025 - September 2025

- Designed and developed a **SaaS-based multi-tenant HR Application Tracking System** from scratch, utilizing a **microservices architecture**.
- Implemented a **GraphQL API Gateway** using **Java Spring Boot 3**, providing a single, flexible endpoint for client applications and eliminating over- and under-fetching of data.
- Secured all microservices and implemented **Role-Based Access Control (RBAC)** using **Keycloak**, with fine-grained authorization policies and **OAuth2/OIDC** tokens.
- Managed data persistence with **PostgreSQL**, employing a **shared database with tenant ID segregation** to ensure tenant isolation while maintaining cost-efficiency and performance.
- Developed and integrated an AI-driven matching and generation layer by developing microservices for **automated candidate ranking (TF-IDF/Cosine Similarity)** and inclusive **job description generation (LLMs like Phi-2/Gemma)**.
- Led a small, agile team to successfully design and deliver the core backend microservices for the platform, showcasing collaboration and leadership skills.

ACADEMIC PROJECTS

1. InView.AI

[GitHub](#)

A modern web application for AI-powered interview creation, participation, and feedback.

Tech Stack: Next.js, React, TypeScript, TailwindCSS, shadcn/ui, Firebase, NextAuth.js, Vapi API, Gemini API

- Developed a full-stack web app for **AI-driven interview creation** and feedback using Next.js, TailwindCSS, and shadcn/ui. Integrated Vapi voice agent for realistic interview experience.
- Integrated Gemini API for smart **resume analysis**, **interview creation**, **interview feedback** and **ATS scoring**.
- Implemented **secure user authentication** with NextAuth.js and **Firebase** backend services.

2. Aushadhi (Smart India Hackathon)

[GitHub](#)

An automated terminology mapping service to bridge Ayurvedic terms with WHO ICD-11 standards.

Tech Stack: Python, NumPy, Pandas, FastAPI, MongoDB, Sentence-Transformers, REST API, HL7 FHIR

- Engineered a high-performance ingestion pipeline using **FastAPI** and **Pandas** to transform raw Ayurvedic CSV data into **HL7 FHIR-compliant CodeSystems** and **ValueSets**.
- Developed a semantic search engine using an **Ensemble Model (SapBERT + MPNet)** to map Ayurvedic definitions to **WHO ICD-11 MMS** codes with high cosine similarity precision.
- Built a **propose-and-promote workflow** allowing reviewers to validate AI-generated mapping suggestions before promoting them to curated status in **MongoDB**.

EDUCATION

2023 - Present

B.Tech in Computer Science & Engineering - Specialization in Artificial Intelligence | CGPA 9.49

School of Computer Science Engineering & Technology - Bennett University

Class XII - CBSE | Aggregate 96.75%

2022 - 2023

Colonel's Central Academy, Gurgaon

ACHIEVEMENTS

- Secured award-winning positions in multiple coding contests organized by student chapters like GeeksforGeeks and IEEE.
- 3-times Dean's List Award winner for securing 9.5+ CGPA in each semester.
- Collaborated effectively in teams during various college-level and national hackathons, working closely with peers to develop innovative solutions.
