Summary

Hello! I'm Gitiksha, currently in third year pursuing B.Tech in Computer Science and Engineering with specialization in Artificial Intelligence at Bennett University. With a strong foundation in data structures, and programming languages like Python, Java, and C++, I have gained valuable experience developing projects that address practical challenges. My approach combines technical expertise with a commitment to continuous learning, as I work to refine my skills and stay ahead in this ever-evolving field.

Education

Bennett University	
Bachelor's degree, Computer Science with Specialization in AI	07/2023 - 07/2027
DAV Public School	
Class 12, Science	05/2022 - 04/2023

Work Experience

SIH'25	
25 th Rank in Internal Round of SIH'25, now preparing for the next round	
Internshala	07/2025 - Present
Campus Ambassador	
Dee Development Engineers Ltd.	06/2025 - 07/2025
Summer Intern	
The Smart Bridge	06/2025 - 07/2025
NASSCOM Internship on concepts of Gen AI, in collaboration with AICTE & FutureSkills Prime	
Edunet Foundation	04/2025 - 05/2025
Project Internship on Foundations of AI, a Microsoft initiative by Edunet Foundation In collaboration with AICTE	

Certification

Introduction to Generative AI — Google Cloud Skills Boost
Neural Networks and Deep Learning — DeepLearning.AI
Data Structures — University of California San Diego
Object-oriented Data Structures in C++ — University of Illinois
Introduction to Probability and Data with R — Duke University
Databases and SQL for Data Science with Python — IBM
Computer Networks and Network Security — IBM
Operating Systems and You: Becoming a Power User — Google

Skills

Google Cloud Platform • Data Structures • C++ • OOPS • Python • Machine Learning • SQL • Query Handling • Java Basics •
Research Skills • HTML • Vertex AI • Generative AI • Teamwork

Projects

LocaLazy - This is a Startup Project idea, which I'm currently working on, 'LocaLazy'. a web app idea that connects small businesses or local vendors to nearby customers. This is beneficial for providing digital visibility to the stores while offering users an easy accessibility to their preferred products within a click.

Sign Language Recognition (SLR) - This project is focused on developing an Sign Language Recognition (SLR) and text & speech conversion system using Machine Learning and Deep Learning. The goal is to bridge communication gaps for individuals with hearing and speech impairments by creating a real-time sign language interpreter.

Stock Trend Prediction - This project is a Stock Price Trend Prediction System deployed on streamlit. It uses a machine learning approach to forecast stock prices based on historical data.

Health Management System - This project is a Health Management System (HMS) developed using Python and Tkinter for creating a user-friendly graphical interface. It facilitates the management of patient information and prescriptions efficiently.

Course Curriculum

DS using C++ • DAA • SML • AI/ML • OOP using Java • Computational Thinking and Programming • Probability and Statistics • CN • OS • Intelligent Model & Design • Image & Video Processing • Software Project Management • High Power Computation
