Aspiring Software Developer with strong problem-solving skills and hands-on development experience.

EDUCATION

Bennett University

Bachelor of Technology in Computer Science & Engineering; CGPA: 8.47

Greater Noida, India

Aug 2023 – May 2027

EXPERIENCE

TechKareer | SDE Intern | Faridabad, India

May 2025 – Aug 2025

- Secured a high-impact role by ranking in the **top 5% of applicants** through a multi-stage technical selection process, demonstrating strong problem-solving and engineering potential.
- Maintained and optimized the **core React.js frontend**, enhancing the user dashboard experience through modular and responsive UI design.
- Engineered specialized **search engine verticals** by developing reusable components and facilitating frontend data integration to meet niche recruitment requirements.
- Collaborated directly with the **Founding Team** to translate product vision into scalable code, contributing to rapid feature iterations.

Universiti Teknologi PETRONAS | Technical Immersion Program | Perak, Malaysia

Aug 2024 – Sept 2024

- Selected as a **merit-based representative** from Bennett University for a competitive international academic exchange focused on global software engineering standards.
- Engaged in a **PETRONAS-sponsored** technical curriculum, gaining exposure to industrial-scale engineering workflows and advanced corporate methodologies.
- Partnered with an **international cohort** to solve complex technical case studies, improving cross-cultural communication and professional adaptivity.

PROJECTS

Armour | Passive Reconnaissance & Security Insights | MERN, Gemini AI, Docker, AWS, Vercel

- **Feature Engineering:** Developed a centralized dashboard that automates data fetching from **6+ OSINT sources**, consolidating security data into a single actionable view.
- **AI Interpretation:** Integrated **Gemini API** to parse raw security logs into natural language summaries, increasing decision-making speed for beginners.
- **Deployment:** Deployed the frontend on **Vercel** for optimized delivery while containerizing the backend with **Docker** for hosting on an **AWS EC2** instance.

Swasth-AI | Predictive Healthcare & Triage Platform | MERN, Gemini AI, Docker, AWS, Vercel

- **Predictive Logic:** Engineered a diagnostic engine leveraging **Gemini API** to analyze **8+ patient parameters**, delivering instant condition predictions and prioritized care recommendations.
- **Geospatial Mapping:** Integrated **Leaflet.js** to provide real-time location tracking, automatically routing users to the nearest medical facilities based on diagnostic urgency.
- **Production Delivery:** Architected a dual-cloud deployment using **Vercel** for the client-side and **AWS EC2** for the server-side, utilizing **Docker** for consistency.

TECHNICAL SKILLS

Languages: C++, JavaScript

Web & Frameworks: HTML, CSS, React, Node.js, Express.js, REST APIs

Databases: MongoDB, SQL (MySQL)

Deployment: Docker, AWS EC2, Vercel

Tools & Platforms: Git, GitHub, Postman, VS Code

CERTIFICATIONS

Data Structures & Algorithms Cohort: CodeHelp by Love Babbar

Operating Systems Specialization: Codio-Coursera

Intro to Cybersecurity Tools & Cyberattacks: IBM

Fundamentals of Network Communication: Univ. of Colorado
