Professional Summary

Data Science undergraduate with hands-on experience in Generative AI, LLMs, RAG systems, and agentic AI workflows. Built production-oriented tools including NLP pipelines, privacy-focused redaction engines, and LLM-powered chatbots.

Technical Skills

Programming: Python, Java (OOP, Data Structures), C++, SQL

AI/ML Frameworks: HuggingFace Transformers, TensorFlow, Keras, Scikit-learn, LangChain, LangGraph, CrewAI

GenAI & LLMs: OpenAI GPT-4, Gemini, MistralAI, Groq

Retrieval & Databases: FAISS, ChromaDB, RAG Pipelines, Google File Search API

DevOps & Tools: Docker, Git, Jupyter, AWS, FastAPI, Streamlit, Supabase

Agentic AI: Multi-Agent Systems, State Machines, LangGraph Workflows

Experience

Software Development Intern — DKY Australia

Sep 2025 – Dec 2025

Perth, Western Australia

- Developed functional prototypes within DKY's Generative AI infrastructure, contributing to multi-agent architectures and foundational RAG pipeline tooling.
- Implemented multi-agent workflows using LangGraph with state-machine-based orchestration to improve reliability and task coordination.
- Led the development of a Streamlit-based RAG Pipeline Manager Dashboard for managing multi-source RAG pipelines integrated with Google File Search stores.
- Designed modular data-source integration, document lifecycle tracking, and configuration-management layers enabling an extensible RAG ecosystem.

Key Projects

Meeting Minutes

Python, CrewAI, Whisper, Gmail API, Gemini

- Built an automated meeting summarizer and dispatch agent using CrewAI for orchestration.
- Integrated Whisper for audio transcription, summarization agents, and Gmail API for automated emailing.
- Used YAML-based agent-task-tool configuration with separate crews for summarization and email dispatch.

Multimodal Redaction Pipeline

Python, NLP, BERT, Gemini, LangChain, OCR

- Created a privacy-focused wrapper around LLMs for redacting sensitive information across text, images, and audio.
- Implemented contextual NER and custom entity rules for high-precision redaction.
- Added a user feedback loop for continuous model refinement.

Department of Justice RAG Chatbot

RAG, LLaMA, FAISS, LangChain

- Developed a retrieval-augmented generation chatbot for legal queries using LLaMA and FAISS.
- Used chunking and retriever→LLM pipelines to maintain factual consistency.
- Ranked 83/400+ teams at Smart India Hackathon.

Education

B.Tech in Computer Science

2022 – Present

Bennett University, Greater Noida

Relevant Coursework: Machine Learning, Data Analytics, Linear Algebra, DAA, OOP in Java

Achievements

10th place, Grafest Hackathon 2025: LLM-based Redaction Engine (200+ teams)

Smart India Hackathon 2024: DoJ GenAI Bot ranked 83/400+ teams
