Education

Bennett University, Greater Noida, India

Expected May 2026

B.Tech. in Computer Science (Artificial Intelligence Specialization)

CGPA: 8.55/10.0

St. Mary's School (ICSE Board)

March 2021

Class XII (ISC): 87% Class X (ICSE): 86%

Projects

BuChat — Full-Stack Serverless Social Platform

Sep 2025 – Present

[buchat.me](#) — *React, Node.js, AWS Lambda, DynamoDB, WebSockets*

- Orchestrated a serverless backend using **15+ AWS Lambda functions**, reducing idle server costs by **100%** compared to traditional EC2 hosting.
- Integrated **Signal Protocol (AES-256)** for end-to-end encryption, ensuring **zero-knowledge privacy** for user messages.
- Implemented WebSocket architecture to support **real-time bi-directional communication** with sub-100ms latency.
- Optimized DynamoDB with **Single-Table Design**, improving data retrieval speeds by **40%** for complex queries.

LeakHere — Media Sharing Platform

Jan 2025 – Jun 2025

[leakhere.com](#) — *React, AWS S3, CloudFront, Route 53, SES*

- Engineered a media delivery pipeline using **AWS CloudFront CDN**, reducing global asset load times by **60%**.
- Developed a dynamic masonry grid capable of rendering **500+ media items** smoothly, boosting session time by **25%**.
- Configured AWS SES for automated transactional emails, achieving a **99.8% delivery rate** for user verification.

Crop Disease Prediction System

Sep 2024 – Dec 2024

📁 [GitHub](#) — *TensorFlow, Docker, AWS App Runner*

- Achieved **95% validation accuracy** by training CNN models on a dataset of **10,000+ plant images**.
- Containerized the application using **Docker**, ensuring **100% environment consistency** across development and production.
- Deployed via **AWS App Runner**, automating the scale-out process to handle concurrent prediction requests.

Feto-Scan — AI Fetal Analysis Tool

Jan 2024 – May 2024

📁 [GitHub](#) — *OpenCV, Deep Learning, Flask*

- Developed an image segmentation model achieving **85% IoU (Intersection over Union)** for fetal head measurement.
- Reduced medical analysis time by **70%** by automating manual caliper measurements with computer vision pipelines.
- Preprocessed **2,000+ ultrasound images** using OpenCV for noise reduction and contrast enhancement.

Technical Skills

- Cloud & DevOps:** AWS (Lambda, API Gateway, DynamoDB, S3, CloudFront, EC2, ECS, Fargate, App Runner, ECR), Docker, Kubernetes, Terraform, Git/GitHub, CI/CD.
- Languages:** Python, JavaScript (Node.js, ES6+), C++, Java, SQL (MySQL).
- Web Frameworks:** React.js, Express.js, Flask, REST APIs, HTML5/CSS3.
- AI/ML Libraries:** TensorFlow, Keras, Scikit-learn, OpenCV, Pandas, NumPy.
- Databases:** Amazon DynamoDB (NoSQL), MySQL, MongoDB.

Certifications & Achievements

- **AWS Solutions Architect** – Coursera Certification ([Link](#))
- **ServiceNow Certified Application Developer (CAD)** – ([Credly](#))
- **ServiceNow Certified System Administrator (CSA)** – ([Credly](#))
- **Machine Learning Specialization** – Stanford/Coursera ([Link](#))
- **Smart India Hackathon 2024 Finalist** – Ranked Top **15%** (56/404 teams) Nationwide ([Certificate](#))
